

# Assignment Instructions

## Goal:

With the help of mockup screens attached, create a responsive web page with Html and CSS for both desktop and mobile. The page should look identical except for images and text for which dummy content can be used. The whole zip including html, css and images folder must be provided and shared to us before the timeline.

## Rules:

1. Bootstrap 4 should be used as the main UI framework. You can use the default components provided by Bootstrap like accordion, etc. as and style them accordingly as per your need.
2. For carousels section, **Owl-Carousel** plugin must be used. The carousel navigation buttons and dots should be identical as per designs provided.
3. For Image - Placeholder/Dummy images can be used in all places instead of real images.
4. For Text - Lorem ipsum text can be added wherever required.
5. For Icons – “**Font-Awesome**” library can be used as per need.
6. Typography to be used are:
  - a. Primary Font Family (for Headings) – **Open Sans**
  - b. Secondary Font Family (For body text) - **Noto Sans**
7. Webpage should be responsive as per Mobile design provided and should start from 768px breakpoint.
8. Anything greater than 768px breakpoint should be considered a desktop device and desktop design should be applied.
9. The font colors and size need not be 100% correct as there is no measurement option provided. So, try to make it look as similar as possible.
10. All the best practices should be followed while writing HTML markup and CSS code.
